PERSONAL PROFILE

Front-end developer (Javascript) with a background in psychology and social services. Experienced in collaborating with various stakeholders to come up with effective, productive and creative solutions. Skilled at understanding user's needs and creating products with them in mind.

FEATURED PROJECTS

myFlix | MERN & MEAN Application

A web app for movie enthusiasts to get information about movies, genres and directors. Users can edit their user details as well as create and edit a list of their favourite movies.

- API is built with REST architecture and uses HTTP and JWT authentication
- Responsive UI built with Bootstrap and custom CSS
- Data validation on the front and back-end

Tech stack: React and Angular, MongoDB, Node.js and Express

ChatApp | Native Application

A mobile app that allows users to chat with each other. Users can pick a background color, read and send messages, share images and their location.

- Uses React Native Async Storage to store and retrieve messages when offline
- UI built with Gifted Chat library
- Uses Expo Location, ImagePicker and Permissions to access users devices and data
- Real-time data transfer using Cloud Firestore

Tech stack: React Native, Expo and Cloud Firestore

Meet Up | Serverless Progressive Web Application

A serverless web app for tech professionals to find upcoming networking and training events in their cities.

- Test-driven-development approach using Jest, Enzyme, Jest-Cucumber and Puppeteer
- Uses the Google Calendar API to fetch upcoming events and Google OAuth2 for authentication
- Data visualization using Recharts

Tech stack: React, Google Calendar API, AWS Lambda
